Bug ID	Title	Description
Bug -001	*Credentails already entered*	The login page should ask for the credentails when the user is from new IP address
Bug -002	Secure HR notepad	Under overview ->secure HR notepad is suppsoed to save the notes which is working right but when the notes are being saved the alert pop up is hidden on the top panel
Bug -003	Confirmation dialog shows "OK/Cancel" instead of "Yes/No" options on delete action	Under overview -> secure HR notepad ,when the saved data is deleted
Bug -005	UI elements on the top panel are overlapping each other	Login-> Dashboard
Bug -006	Aadhar Number field in "Add Employee" allows more than 12 characters	Login-> Expand "workforce -> employee directory "
Bug- 007	Phone Number field in "Add Employee" allows more than 10 characters	Login-> Expand "workforce -> employee directory "

Bug - 008	No confirmation popup shown after saving employee details in "Add Employee" feature	Login-> Expand "workforce -> employee directory " -> add employee
Bug - 009	Phone number and Aadhar details overflow outside their container under "View Details & Doc section	Login-> Expand "workforce -> employee directory " -> add employee-> save employee details
Bug - 010	No input fields for Address and Emergency Contact in "Add Employee" form, though they appear in "View Details"	Login-> Expand "workforce -> employee directory " -> add employee-> save employee details
Bug - 011	Uploaded profile picture not displayed in profile; employee name shown instead	Login-> Expand "workforce -> employee directory " -> add employee-> save employee details ->core employee grid
Bug - 012	"Duplicate" error thrown while adding a new employee (even when details are unique)	Login-> Expand "workforce -> employee directory " -> add employee-> save employee details

Bug - 013	Adding a company with "Inactive" status fails with an error; retry shows duplicate error instead of saving	Login -> workforce->org setup->company hierachy->company profile->register compnay
Bug- 014	Adding a Business unit with "Inactive" status fails with an error; retry shows duplicate error instead of saving	Login -> workforce->org setup->company hierachy->Business unit profile->add Business unit
Bug- 015	Adding a cost centers with "Inactive" status fails with an error; retry shows duplicate error instead of saving	Login -> workforce->org setup->company hierachy->cost centers ->add cost centers
Bug -016	Adding a departments with "Inactive" status fails with an error; retry shows duplicate error instead of saving	Login -> workforce->org setup->department structure -> department

Bug -017	Confirmation popup not clearly visible and PDF download fails on "Generate Payslip" action	When the user clicks the "Generate Payslip" button, the system is expected to show a clear confirmation popup indicating the payslip was generated successfully, and allow the user to download the payslip as a PDF. Currently, the confirmation popup does not display clearly (e.g., appears cut off, overlapping, too brief, or not visibly rendered), and the "Download PDF" action does not work — the PDF either fails to download, downloads as corrupted/empty, or the download action produces no response.
Bug 018	Unable to upload document under "Confidential Document Vault	When the user attempts to upload a document to the Confidential Document Vault section, the upload action fails to complete. The document either does not upload at all, gets stuck in a loading/processing state indefinitely, or returns an error without a clear explanation, preventing the user from securely storing confidential files
Bug 018	Download version undefined" error when downloading a file from Employee Vault	When a user attempts to download a file stored in the Employee Vault, the system throws an error referencing an undefined version (e.g., "download version undefined") instead of successfully downloading the file. This suggests the file's version metadata is not being correctly passed, fetched, or resolved by the application when the download request is triggered, causing the download to fail.

Bug 019	Run Expiry Scan" confirmation popup not visible on first click; requires multiple clicks, causing popups to stack and appear one by one	When the user clicks the **"Run Expiry Scan"** button, the confirmation popup does not appear visibly on the first click. The user has to click the same button 3–4 times, after which the popups appear one after another (stacked/queued), instead of a single confirmation popup appearing immediately after the first click. This indicates the popup may be rendering behind other elements, failing to trigger on click, or multiple click events are being queued and rendered sequentially rather than being debounced or deduplicated.
Bug 020	Current Role" RBAC view filter not working under Enterprise Recruitment & Onboarding module	Under the **Enterprise Recruitment & Onboarding** module, the Role-Based Access Control (RBAC) filter for **"Current Role"** is not functioning as expected. When a user applies or selects this filter, the displayed data/view does not update or restrict based on the selected role, meaning users may see data/options that should be filtered according to role-based permissions, or the filter has no visible effect on the view at all.
Bug 021	Create Manpower Requisition" button requires multiple clicks (3–4 attempts) to create the table with entered details	When the user clicks the **"Create Manpower Requisition"** button after entering the required details, the table with the entered data does not get created on the first click. The user has to click the button repeatedly (3–4 times) before the table finally renders with the correct details. This suggests the button click event is either not registering properly on the first attempt, the form submission/API call is failing silently, or there's a delay/race condition where the table render is not synced with the actual data creation response.

Bug 022	Create Manpower Requisition" box overlapping/colliding with "Requisition Workflow Timeline" box	On the Manpower Requisition screen, the **"Create Manpower Requisition"** box/section is visually colliding (overlapping) with the **"Requisition Workflow Timeline"** box. This layout/UI issue causes both sections to be partially or fully obscured, making it difficult for the user to read content or interact with elements in either section
Bug 023	Duplicate entries being recorded in the Manpower Requisitions Hub table	The **Manpower Requisitions Hub** table is recording duplicate entries for the same requisition. Instead of a single record being created per requisition submission, multiple identical (or near-identical) rows appear in the table, leading to data redundancy and potential confusion during tracking, reporting, or approval workflows.
Bug 024	Data entered in "Vacancy Budget Approval & Cost Center Allocation" not saving to the table on first attempt	When a user enters data into the **Vacancy Budget Approval & Cost Center Allocation** section and attempts to save it, the data does not get saved/recorded in the table on the first attempt. This suggests the save action may be failing silently, not triggering the correct API call on the first try, or there's a timing/sync issue between the form submission and the table update — consistent with a pattern of similar "first-click fails" issues seen elsewhere in the application.

Bug 025	Error analyzing resume" thrown in Resume Parser and JD Matching under Talent Growth → Recruitment ATS	Under **Talent Growth → Recruitment ATS → Resume Parser and JD Matching**, when a user attempts to analyze/parse a resume against a job description (JD), the system throws an **"Error analyzing resume"** message instead of successfully parsing the resume and returning the JD match results. This prevents recruiters from using the automated resume screening/matching functionality.
Bug 026	Recorded expense entry not saving to the table on first attempt under Cost Tracking & Cost-Per-Hire Calculator	Under **Talent Growth → Recruitment ATS → Recruitment → Cost Tracking & Cost-Per-Hire Calculator**, when a user enters and records an expense entry, the data does not get saved to the table on the first attempt. This is consistent with a recurring "first attempt fails" pattern observed across multiple modules in the application, suggesting a possible shared root cause in how save/submit actions are handled
Bug 027	Misaligned table layout in "Configurable Rating Scales and Performance Template Breakdown" under Appraisal, Increments & PIP Lifecycle	Under **Talent Growth → Performance & Appraisal → Appraisal, Increments & PIP Lifecycle**, the **"Configurable Rating Scales and Performance Template Breakdown"** table has layout/alignment issues. The data within the table is not properly placed within its intended columns/rows — content appears misaligned, shifted, or inconsistent with the table headers, making the information difficult to read and interpret accurately.

Bug 028	Assign Employee Goal" under KRAs, KPIs & Goal Setting Hub saves only after 2–3 attempts, resulting in duplicate values	Under **Talent Growth → Performance & Appraisal → KRAs, KPIs & Goal Setting Hub**, when a user attempts to assign an employee goal, the save action does not succeed on the first attempt. It takes 2–3 attempts for the goal to actually save, and as a result, **duplicate goal entries** get created/recorded instead of a single clean entry — consistent with the recurring "first-attempt save failure" pattern observed across multiple other modules in the application.
Bug 029	Recommend Promotion" button not saving data to the table on first click	Under **Talent Growth → Performance & Appraisal**, when a user clicks the **"Recommend Promotion"** button after entering the relevant details, the data is not saved/added to the table on the first attempt. The entry only appears after repeated clicks, consistent with the recurring "first-click save failure" pattern already observed across multiple other modules in the application.

Bug 030	Recommend Increment" button only saves the first record; entering a second record deletes/overwrites the first without saving the new one	Under **Talent Growth → Performance & Appraisal → Increment Recommendations & Payroll Integration**, the **"Recommend Increment"** action only successfully saves the **first** record entered. When the user attempts to enter and save a **second** increment recommendation, the previously saved first entry gets deleted/removed, and the new (second) entry is also not saved — resulting in **no valid records** remaining in the table after the second attempt. This indicates the form/table state may not be correctly resetting or appending new records, and may instead be overwriting or clearing existing data instead of adding to it.
Bug 031	Duplicate records being saved for "Recommend Promotion" action	Following up on the previously reported issue where the **"Recommend Promotion"** button does not save data on the first click — it has now been confirmed that the repeated click attempts result in **duplicate promotion recommendation records** being saved to the table. Instead of a single entry per recommendation, multiple identical (or near-identical) rows are created, leading to data redundancy in a critical HR/appraisal process.

Bug 032	Same data-loss bug in Performance Improvement Plan (PIP) Lifecycle — saving a second record deletes the first without saving the new one	Under **Talent Growth → Performance & Appraisal → Performance Improvement Plan (PIP) Lifecycle**, the same behavior reported in "Increment Recommendations & Payroll Integration" is occurring here. Only the **first** PIP record entered gets saved successfully. When the user attempts to add a **second** PIP record, the previously saved first entry gets deleted/removed from the table, and the new (second) entry also fails to save — leaving the table with no valid records after the second attempt.
Bug 033	Font colors in Dashboard Overview are not legible/clear	On the **Dashboard Overview** screen, the font colors used for text/data display are not clearly legible. This may be due to low contrast between the text color and background color, overly light/faded font shades, or color combinations that make it difficult for users to read key information at a glance — impacting overall usability and accessibility of the dashboard.

Bug 034	Support & Reports" navigation tab overlapping with search bar in top navigation	In the top navigation bar, the **"Support & Reports"** menu item is visually colliding/overlapping with the **search bar** (placeholder text appears to read something like "...ards or cod..." based on the visible fragment). Both elements are rendering on top of each other in the same space, making the tab label and the search box placeholder text unreadable and the search bar unusable/inaccessible.
Bug 035	Open New Ticket" feature not working under IT & HR Helpdesk Support Desk	Under the **IT/HR Helpdesk → Support Desk** section, the **"Open New Ticket"** feature is not functioning as expected. When a user attempts to raise a new support ticket, the action fails to complete — the ticket is either not created, the form doesn't submit, or no confirmation/ticket ID is generated, preventing users from logging IT or HR support requests.

Bug 036	Dropdown options in "Request Welfare Support" form not visible until selected	In the **"Request Welfare Support"** popup (under Welfare Support), the **"Welfare Type"** dropdown does not display its list of options when clicked/opened. The dropdown appears to expand (or show a highlighted state), but no visible option list appears for the user to choose from — the user seems to only get a value populated (e.g., "Education Support") after already selecting it, without being able to see the available options during selection. This suggests the dropdown's option list may be rendering with incorrect visibility/z-index, transparent/matching background color, or not rendering at all until an option is somehow chosen.
Bug 037	Export downloads (CSV/PDF/XLSX) not working under "HR Budget & Financial Reports Export	Under the **HR Budget & Financial Reports Export** section, clicking the export buttons (e.g., "Export (PDF/XLSX)", "Export (XLSX)", "Export (PDF)") across the report cards — Annual HR Budget Report, Budget Variance & Forecast, Recruitment Cost ROI Report, Welfare Expenditure Register, and Manpower Headcount Financials — does not successfully download the file. The download either does not initiate, fails silently, or produces an empty/corrupted file, preventing users from exporting HR budget and financial reports

Bug -039	View" button not functioning for Challan Receipt documents under Statutory Compliance Document Vault	Under the **Statutory Compliance Document Vault**, clicking the **"View"** button on Challan Receipt documents (e.g., "PF ECR Payment Receipt Jul 2026") does not work. The document fails to open — either nothing happens on click, a blank page/viewer appears, or an error is thrown, preventing users from viewing the uploaded compliance document.

	Raw JSON data dumped unformatted in "Details" column of Immutable Statutory Audit Logs Logs table, causing horizontal overflow	In the **Immutable Statutory Audit Logs** table (under Finance & Exit or Budget module), the last column displays the **raw, unformatted JSON object** for each audit entry instead of a human-readable summary of the change/details. This causes the table to overflow significantly beyond the visible screen width, forcing users to scroll horizontally to read a wall of unstructured JSON text. Additionally, the table title itself appears clipped at the left edge (showing "...mmutable Budget Audit Logs..." instead of "Immutable Budget Audit Logs..."), and the "Audit ID" column values also appear truncated/cut off on the left.

fix both of tl

Bug -041	Duplicate records being created under Automated Full & Final (F&F) Settlement Register	Under the **Automated Full & Final (F&F) Settlement Register**, duplicate entries are being created for the same employee settlement. Instead of a single record being generated per F&F settlement processed, multiple identical (or near-identical) rows appear in the register, leading to data redundancy — consistent with the recurring "duplicate record on save/submit" pattern already observed across several other modules in the application.

Bug -042	Download NDC PDF" and "Generate" (Exit Letters) buttons show success popup but no actual document is produced	Under **No Due Certificate (NDC) Generation** and **Official Exit Letters Generator**, clicking **"Download Official NDC PDF"** or any of the **"Generate"** buttons (Relieving Letter, Experience Certificate, Full & Final Statement) triggers a success/confirmation popup, but no actual file is downloaded or generated. The UI falsely indicates success while failing to deliver the underlying document, misleading users into believing the action completed correctly
Bug -043	Print Report layout broken — navigation/UI elements overlapping and misaligned in print preview	When printing the **HR Observations Compliance Reports** (via "Print Report Sheet"), the print preview/output does not render a clean, report-only layout. Instead, it includes leftover application UI elements — the top navigation bar (with overlapping menu items like "Talent & Growth," "Finance," "Governance," and the search bar), tab bars (Observation Dashboard, Create Observation, etc.), and page chrome — all misaligned and overlapping each other. This indicates the print stylesheet is not properly hiding non-report UI elements or restructuring the layout for print, resulting in a cluttered, unprofessional printed/exported output

Bug -044	Download Report" button not functioning under Internal Regulatory Audit Archives (Governance module)	Under **Governance → Internal Regulatory Audit Archives**, clicking the **"Download Report"** button on any of the listed audit documents (e.g., "Q1_Statutory_Compliance_Report_2026.pdf," "ISO_27001_Compliance_Statement_2026.pdf," "POSH_Annual_Compliance_Audit_2026.pdf") does not download the file. No file is saved to the user's device, and no visible error message is shown to indicate the failure.
Bug -045	i" icon dropdown menu (Support Tickets / Reports & Audits / Alert Center) closes before it can be clicked	Hovering over the **"i" (info) icon** in the top navigation bar triggers a dropdown menu showing three options — **Support Tickets**, **Reports & Audits**, and **Alert Center**. However, the menu is not clickable/interactive — as soon as the cursor moves from the icon toward the dropdown options to select one, the menu closes/vanishes before the user can click any item, making the entire menu unusable.
	Employee portal	

Bug -046	Initiate PIP" form and "Periodic PIP Review Log" panel colliding/overlapping on screen	Under **Growth & Talent → PIP Lifecycle Engine**, the **"Initiate PIP"** form (with fields like Performance Gap Identified, Expected Performance Target, Cancel/Initiate PIP buttons) and the **"Periodic PIP Review Log: PIP-2026-0002"** panel (with Progress Rating, PIP Outcome Status, etc.) are both rendering stacked directly on top of/immediately below each other without proper spacing or separation, making the page look cluttered and causing visual collision between two distinct, unrelated forms/panels on the same view.
Bug -047	Font legibility issue in Light Theme — text appears faded/low-contrast under Module 8: Training & Competency Evaluation dashboard	Under **Growth & Talent → Training & Competency Evaluation → Dashboard Overview**, when viewed in **Light Theme**, several text elements are rendering with low contrast against their backgrounds, making them hard to read. This includes the module title ("Module 8: Training & Competency Evaluation"), its description text, and the stat card labels/numbers (e.g., "SCHEDULED PROGRAMS," "TNA REQUESTS," "ISSUED CERTIFICATES," "SKILL GAP CLOSURE" and their sub-labels like "0 Completed this month," "0 HR Approved," "Avg Score: 86.2%," "Budget Utilization: 74.5%"). The text appears faded/washed out rather than clearly legible dark text on the light background.

Bug -048	"Enroll Now" button fails with 400 Bad Request on Training Program enrollment	Clicking the "Enroll Now" button on a training program card (under Growth & Talent → Learning & Dev) fails to enroll the user. The API call to the enroll endpoint returns a 400 Bad Request error, and enrollment is not completed. This occurs on multiple training program records (TRN-1001, TRN-1002), suggesting a systemic issue rather than one bad record.
Bug -049	UI alignment/spacing issue in "Request Position Approval" modal form fields	On the "Request Position Approval" modal (Governance/Operations module), the form fields are not properly aligned within the two-column grid layout. Input boxes and labels across rows (Position Title/Department, Designation/Grade Band, Current Headcount/Proposed Headcount) appear cramped or misaligned, giving a visually inconsistent/colliding appearance instead of clean, evenly-spaced grid alignment. This is a cosmetic/UI issue and does not affect functionality.

Bug -050	Resume parsing fails with 500 Internal Server Error on "Parse Resume & Calculate Score	When a user uploads a resume file and clicks "Parse Resume & Calculate Score" (Growth & Talent → Recruitment module), the parsing/analysis fails. The API call to upload the resume returns a 500 Internal Server Error, so the resume is not parsed and no score is calculated.
Bug -051	View" action on Budget Planning Register does not open/display budget details	In the "Annual HR Budget Planning Register" table (Finance & Exit → Budget Planning), clicking the "View" action link/icon against any budget row does not display any details, modal, or navigation to a detail view. No visible response occurs on click.

Bug -052	Notifications API times out (8000ms exceeded) after triggering "Transfer" on Budget Allocation, with UI thread violations	When a user clicks "Transfer" on a budget allocation row (Finance & Exit → Budget Allocation), the transfer action itself completes successfully (confirmed by the "Transfer allocation request initiated" toast). However, the console immediately logs an AxiosError indicating the notifications API call timed out after 8000ms. Additionally, multiple [Violation] 'message' handler took Nms warnings appear (up to 1926ms), indicating the main thread is being blocked for unusually long periods around this action.
Bug -053	Raw/unformatted JSON payload displayed in Audit Logs table instead of readable data	In the "Immutable Budget Audit Logs & Revision Timeline" table (Finance & Exit → Budget History), the details column for CREATE_BUDGET actions renders the raw, unparsed JSON object (e.g., {"budgetId":"BDG-1790683637521","financialYear":"FY 2026-2027",...}) directly in the UI instead of formatting it into readable labels/values. This makes the audit log difficult to read for end users and exposes internal field names/data structure directly in the UI.

Bug -054	Welfare Budget" and "Welfare Expense" tabs display the same table with no distinguishable data	Under Finance & Exit → HR Budgeting & Cost Analytics, the "Welfare Budget" and "Welfare Expense" tabs appear to render identical content ("Employee Welfare Expenditures & Vendor Invoices" table with Expense ID, Activity, Category, Vendor, Date, Beneficiaries, Total Amount, Status columns). There is no visible differentiation between budgeted welfare allocation (which should show planned/proposed amounts) and actual welfare expenses (which should show incurred/logged spend).
Bug -055	Welfare Budget module APIs return 401 Unauthorized, falling back to stateful/cached data	Multiple API calls related to the Welfare Budget module fail with 401 (Unauthorized), including POST /api/budget/welfare-expense, GET /api/budget/welfare and GET /api/policies/employee-status. The console shows the app silently falling back to a "stateful fallback for budget module" when the real API call fails, meaning the data shown on screen may not reflect live/accurate backend data. This could explain why Welfare Budget and Welfare Expense appear identical the UI may be displaying stale fallback/mock data rather than real API responses.

Bug -056	Submit Ticket" button fails with "e.preventDefault is not a function" JavaScript error	When submitting the "Raise a Ticket" / HR Query form (accessible from the Employee Profile page), clicking "Submit Ticket" throws an uncaught JavaScript error in the console: TypeError: e.preventDefault is not a function. The form submission does not complete, and the ticket is not created.
Bug -057	Personal Details form fails to save — "e.preventDefault is not a function" error; fields reset with no success/error message	On the Employee Profile page, when a user fills in Personal Details fields (Street/Area, City, State, PIN Code, Emergency Contact, etc.) and clicks "Save Changes," the same uncaught JavaScript error seen in (TypeError: e.preventDefault is not a function) is thrown. As a result, none of the entered data is saved/persisted, all entered field values disappear/reset, and no success or error message is displayed to the user, leaving them unaware that the save failed.

Bug -058	"Upload Profile Picture" fails with request timeout, shows generic error message	On the Employee Profile page, clicking "Upload Profile Picture" and attempting to upload an image fails. The UI displays a generic "Failed to upload profile picture" error toast, while the console shows an AxiosError: timeout of 8000ms exceeded indicating the upload request is not completing within the configured timeout window.
Bug -059	"Update Password" fails with "User not found" error	On the Employee Profile page, clicking "Update Password" fails and returns a "User not found" error, even though the user is actively logged in and viewing their own profile (Aditya, EMP-0002). The password is not updated.

Bug -060	Column misalignment in "Multi-Department No Due Clearance Tasks" table	On the Exit Workflow & Full & Final (F&F) page, under the "Department Clearances" tab, the "Multi-Department No Due Clearance Tasks" table has inconsistent column alignment. Data values in rows do not line up cleanly under their respective column headers (e.g., Clearance Department, Approver Name, Action Date, Remarks/Handover Notes), making the table harder to scan and read accurately.
Bug -061	"View Course" button on Training Reminders card does not function	On the Employee Dashboard, under the "Training Reminders" section, clicking the "View Course" button for an assigned training (e.g., "Secure Coding & Manifest V3 Guidelines") does not perform any action — the user is not navigated to the course content or training module.

Bug -062	Punch In/Punch Out fails — "Timesheet validation failed: Cast to date failed for value" error	On the Attendance page (Operations → Overview), the Attendance Punch Clock malfunctions. The UI displays a persistent error banner:Timesheet validation failed: clockIn: Cast to date failed for value "00:47" (type string) at path "clockIn"
Bug -063	Top navigation bar arrows (< >) do not scroll the menu when clicked	The left and right arrow buttons next to the HR O logo in the top navigation bar are meant to scroll the menu horizontally. Clicking the right arrow (>) does not move the nav bar, so menu items hidden beyond the visible area (e.g., the truncated item after "Finance & Exit") cannot be reached with the arrows.

Bug -064	Dropdown of the last (truncated) nav menu closes when clicking its options (Tasks, Meetings, Daily Reports, Helpdesk Support)	The last top-navigation item after "Finance & Exit" is partly cut off, with only its icon and a "V…" label visible. Opening it shows a dropdown with Tasks, Meetings, Daily Reports and Helpdesk Support. When the user moves the cursor onto an option to click it, the dropdown disappears, so none of the options can be selected. The dropdown also renders far from its trigger, below the search bar on the right, rather than directly under the menu item.
Bug -065	Database Disconnected, Showing cached offline data" banner appears frequently on the Employee Dashboard	While using the HR O Employee Portal, an orange banner intermittently appears at the top of the page reading "Database Disconnected, Showing cached offline data."
Bug -066	"Clocked in at" shows "--" instead of the punch-in time; Shift Timer displays an implausible elapsed time	On the Attendance Punch Clock widget, the status shows "Clocked In" and "ACTIVE SHIFT", but the "Clocked in at" field shows "--" instead of the actual punch-in time. The Shift Timer displays 330:33:23, which is not a valid shift duration. The widget is not reading or displaying the stored clock-in timestamp.

Bug -067	Global search bar (“Search features, tools or c…”) returns no results or suggestions	The global search bar in the top navigation is meant to help users find features and tools. When a term such as “payroll & salary” is typed, no results, suggestions or “no results found” message appear, and the user is not taken to any page. The search is effectively non-functional.

Bug -068	“Security Illustration” image is broken on the Security & Config page	On the Employee Settings page (Security & Config), the illustration under the description text fails to load. A broken image icon with the alt text “Security Illustration” is shown instead of the graphic. The page looks unfinished and leaves a gap in the layout.
Bug -069	“View” action on Budget Planning Register still does not open budget details (retest failed)	In the “Annual HR Budget Planning Register” (Finance & Exit → HR Budgeting & Cost Analytics → Budget Planning), clicking “View” on any budget row produces no modal, drawer, or page navigation. The issue was reported on 29-Sep and persists on 14-Oct.

Bug -070	“Cost Analytics” tab shows a blank page with no tables or charts	In HR Budgeting & Cost Analytics, clicking the “Cost Analytics” tab highlights the tab but renders no content. There are no tables, charts, loading indicator, empty-state message or error message, so the user cannot tell whether data is missing or the page failed to load.
Bug -071	“Forecast & Variance” tab shows a blank page with no tables or charts	Clicking the “Forecast & Variance” tab in HR Budgeting & Cost Analytics renders no tables, charts or messages. The behavior matches the Cost Analytics tab
Bug -072	“Create Manpower Requisition” modal has excessive empty space above and below, and is not properly centered	In the Enterprise Recruitment & Onboarding, opening the “Create Manpower Requisition” modal shows a large blank area at the top of the overlay. The modal sits low on the screen and its content is pushed partly out of view. Extra space is also reported at the bottom. The modal looks mispositioned and the form is hard to use without scrolling.

Bug -073	Duplicate module and table rendered on Recruitment ATS after recording a new expense entry	In Recruitment ATS → Cost Tracking, recording a new expense entry creates a duplicate copy of the “Recruitment Cost Tracking & Cost-Per-Hire Calculator” table. The page shows the “Module 5: Enterprise Recruitment & Onboarding” heading and description twice, which suggests the entire module is rendered a second time instead of the existing table updating.

Steps to Reproduce	Expected Result	Actual Result
1. Launching the URL *2. Entering the credentails* *3. Click Login*	*Everytime a new user tries to logs in the credential text box should be empty*	*When a new user lanuched the URL and tries to create a new user ,can see credentials already been entered there*
1.Login with credentails *2. Click overview on the top left corner* *3. scroll down and click on secure HR notepad* *4.Type title note and Confidential notes* *5.Select "General" under the dropdown* *6. Click save*	Everytime when a new data is saved the alert pop up should be visible	When a new data is saved the alert pop up hides under the top panel
1.Login with credentails 2. Click overview on the top left corner 3. scroll down and click on secure HR notepad 4.Type title note and Confidential notes 5.Select "General" under the dropdown 6. Click save 7.Delete the saved data	The confirmation popup should display the message "Are you sure you want to delete?" with two options: **"Yes"** and **"No"**	The confirmation popup displays the message "Are you sure you want to delete?" but the button options are **"OK"** and **"Cancel"** instead of "Yes" and "No"
1.Log in to the application 2.Observe the top panel/header section 3.Notice that the options/icons/menu items are overlapping one another instead of being properly spaced	All options on the top panel should be displayed with proper spacing/alignment, with no overlapping elements, ensuring each option is clearly visible and clickable	The options on the top panel appear overlapped on top of each other, making it difficult to identify or click individual items
1.Log in with credentials 2.Expand workforce-> employee directory 3.Navigate to the "Add Employee" screen 4. Go to the Aadhar Number field 5.Enter more than 12 digits/characters 6.observe that it allows more than 12 characters without restriction	The Aadhar Number field should restrict input to exactly 12 digits and should not allow entry of more than 12 characters. It should also ideally validate that only numeric values are accepted.	The Aadhar Number field allows entry of more than 12 characters, with no validation or character limit enforced.
1.Log in with credentials 2.Expand workforce-> employee directory 3.Navigate to the "Add Employee" screen 4. Go to the phone Number field 5.Enter more than 10 digits/characters 6.observe that it allows more than 10 characters without restriction	The Phone Number field should restrict input to exactly 10 digits and should not allow entry of more than 10 characters. It should also ideally validate that only numeric values are accepted.	The phoneNumber field allows entry of more than 10 characters, with no validation or character limit enforced.

1.Log in with credentials 2.Expand workforce-> employee directory 3.Navigate to the "Add Employee" screen 4.Fill in all required employee details 5.Click the "Save" button 6.Observe the screen after saving	After successfully saving the employee details, a confirmation popup/message (e.g., "Employee details saved successfully") should be displayed to the user.	No confirmation popup or success message is displayed after saving the employee details, leaving the user unsure whether the data was saved successfully.
1.Log in to the application 2.Add a new employee with phone number and Aadhar details Navigate to "View Details" for that employee 3.Go to the Documents section 4.Observe the display of Phone Number and Aadhar details	Phone number and Aadhar details should be displayed neatly within their designated container/box, with proper alignment, padding, and text wrapping	The Phone number and Aadhar details overflow outside their container/box, making the UI look untidy and unprofessional
1.Log in to the application 2.Add a new employee Navigate to "View Details" for that employee 3.Go to the Documents section 4.Observe the display of address and emergency contact	The "Add Employee" form should include input fields for "Address" and "Emergency Contact" so that users can enter this data at the time of employee creation, consistent with what is displayed in "View Details".	The "Add Employee" form does not have fields to enter Address and Emergency Contact details, but these fields/sections are shown (empty or with placeholder) in "View Details", creating an inconsistency between data entry and data display screens.
1.Log in to the application 2.Add a new employee 3.Navigate to "Core employees grid" for that employee 4.Click on the camera image and add a profile picture	The uploaded profile picture should be displayed in the employee's profile picture placeholder.	Instead of displaying the uploaded profile picture, the profile picture section shows the employee's name (likely as initials/text placeholder), even though a picture was successfully uploaded.
1.Log in to the application 2.Add a new employee by filling all the details unique 3.click on save employee detail	The employee should be added successfully without any error, provided all entered details (e.g., Employee ID, Aadhar Number, Phone Number, Email) are unique and not already existing in the system.	A "Duplicate" error is displayed, preventing the employee from being added, even though the entered details appear to be unique/new

1.Log in to the application 2.Navigate to workforce->org setup->company hierachy->company profile 3.Fill in company details and set Status as "Inactive" 4.Click "Save" 5.Observe the error shown 6.Attempt to save the same details again Observe the second error message	The company details should be saved successfully with "Inactive" status selected, without any errors.	On the first attempt, the details are not saved and an error code/message is displayed: Error code
		On the second attempt (retry), a different message is shown: Company details getting saved
1.Log in to the application 2.Navigate to workforce->org setup->company hierachy-> Business unit 3.Fill in business unit details and set Status as "Inactive" 4.Click "Save" 5.Observe the error shown 6.Attempt to save the same details again Observe the second error message	The business unit details should be saved successfully with "Inactive" status selected, without any errors.	The business unit details should be saved successfully with "Inactive" status selected, without any errors.
		On the second attempt (retry), a different message is shown: Company details getting saved
1.Log in to the application 2.Navigate to workforce->org setup->company hierachy-> Cost centers 3.Fill in cost centre details and set Status as "Inactive" 4.Click "Save" 5.Observe the error shown 6.Attempt to save the same details again Observe the second error message	The business unit details should be saved successfully with "Inactive" status selected, without any errors.	The business unit details should be saved successfully with "Inactive" status selected, without any errors.
		On the second attempt (retry), a different message is shown: Company details getting saved
1.Log in to the application 2.Navigate to workforce->org setup->department structures -> department 3.Fill in cost centre details and set Status as "Inactive" 4.Click "Save" 5.Observe the error shown 6.Attempt to save the same details again Observe the second error message	The department details should be saved successfully with "Inactive" status selected, without any errors.	The business unit details should be saved successfully with "Inactive" status selected, without any errors.

		On the second attempt (retry), a different message is shown: Company details getting saved
1.Log in to the application/portal. 2.Navigate to the Payslip / Payroll section. 3.Select the relevant month/employee for which the payslip needs to be generated. 4.Click the "Generate Payslip" button 5.Observe the confirmation popup that appears after generation. 6.Click "Download PDF" to download the generated payslip.	1.After clicking "Generate Payslip," a clear, readable confirmation popup should appear confirming successful generation. 2.Clicking "Download PDF" should successfully download a valid, readable PDF copy of the payslip to the user's device.	1.The confirmation popup appears but is not clearly visible/readable (e.g., poor rendering, disappears too fast, or is visually broken). 2.Clicking "Download PDF" does not work — no file downloads, or the download fails/errors out.
1.Log in to the application/portal. 2.Navigate to the Confidential Document Vault section. 3.Click "Upload Document" (or equivalent button). 4.Select a file from the local device (e.g., PDF, DOCX, image). 5.Click "Upload" / "Submit" to complete the upload. 6.Observe the result.	1.The selected document should upload successfully to the Confidential Document Vault. 2.A confirmation message or updated file list should appear, showing the newly uploaded document. 3.The document should be securely stored and retrievable/viewable later.	The upload fails to complete — either no progress occurs, it hangs indefinitely, an error message appears, or the upload silently fails with no document added to the vault.
1.Log in to the application/portal. 2.Navigate to the Employee Vault section. 3.Locate a file that has been previously uploaded/stored. 4.Click the "Download" option/icon for that file. 5.Observe the error message displayed.	1.Clicking "Download" should successfully download the correct, latest (or selected) version of the file to the user's device. 2.No error should be displayed if the file and its version data exist correctly in the system.	An error is displayed: **"download version undefined"**, and the file fails to download.

1.Log in to the application/portal. 2.Navigate to the section containing the "Run Expiry Scan" button 3.Click the "Run Expiry Scan" button once. 4.Observe that no confirmation popup is visibly shown. 5.click the same button repeatedly (3–4 times). 6.Observe the popups appearing one by one after the repeated clicks	1.On the first click of "Run Expiry Scan," a single confirmation popup should appear immediately and clearly, confirming the scan has been triggered. 2.Repeated clicks (if the scan is already running/queued) should either be ignored, disabled, or show a single relevant message — not multiple stacked popups.	1.No popup appears on the first click. 2.Multiple clicks cause multiple popups to appear one after another, indicating each click is being separately queued/registered instead of the button being disabled or debounced after the first click.
1.Log in to the application/portal. 2.Navigate to the module and locate the RBAC / role-based view filter option (labeled "Current Role"). 3.Select or apply a specific role from the "Current Role" filter. 4.Observe the resulting view/data displayed.	1.Selecting a role under the "Current Role" filter should dynamically update the view to show only the data, options, or permissions relevant to that selected role. 2.Users should not be able to see data/actions outside the scope of the selected role's permissions.	The view does not change or filter correctly when a role is selected under "Current Role" — either the data remains unfiltered, shows incorrect role-based data, or the filter selection has no effect at all.
1.Log in to the application/portal. 2.Navigate to the Manpower Requisition section 3.Enter the required details in the form fields. 4.Click the "Create Manpower Requisition" button once. 5.Observe that the table is not created/displayed. 6.Click the same button repeatedly (3–4 times). 7.Observe that the table eventually gets created with the entered details.	On the first click of "Create Manpower Requisition," the table should be created immediately and display the entered details accurately, without requiring repeated clicks.	1.The table is not created on the first click. 2.Only after clicking the button 3–4 times does the table finally appear with the entered details — indicating inconsistent or delayed response handling.

1.Log in to the application/portal. 2.Navigate to the Manpower Requisition section 3.Observe the layout where the "Create Manpower Requisition" box and the "Requisition Workflow Timeline" box are displayed on the same screen/page. 4.Note the visual overlap/collision between the two boxes. .	1.Both the "Create Manpower Requisition" box and the "Requisition Workflow Timeline" box should be displayed in their own clearly defined, non-overlapping areas. 2.All content and interactive elements in both sections should be fully visible and usable, regardless of screen size/resolution.	The two boxes overlap/collide with each other, causing content to be cut off, hidden, or visually broken, and potentially blocking user interaction with elements underneath.
1.Log in to the application/portal. 2.Navigate to the Manpower Requisition section and create a new requisition (fill in details and submit). 3.Navigate to the Manpower Requisitions Hub table. 4.Search/filter for the newly created requisition entry. 5.Observe the number of rows/records displayed for that single requisition.	Each requisition submission should create exactly **one** corresponding entry in the Manpower Requisitions Hub table.	Multiple duplicate entries appear in the Manpower Requisitions Hub table for what should be a single requisition submission.
1.Log in to the application/portal. 2.Navigate to the Vacancy Budget Approval & Cost Center Allocation section. 3.Enter the required data (budget details, cost center allocation, etc.) into the form fields. 4.Click "Save" (or equivalent action button) once.. 5.Check the table to see if the entered data has been recorded. 6.If not saved, repeat the save action and observe..	On the first attempt, the entered data should be saved successfully and immediately reflected in the table.	The entered data is not saved to the table on the first attempt; the save action appears to fail or not register correctly, requiring a repeat attempt.

1.Log in to the application/portal. 2.Navigate to Talent Growth → Recruitment (ATS) → Resume Parser and JD Matching. 3.Upload a candidate resume (note file format/size). 4.Select or link the relevant Job Description (JD) for matching. 5.Trigger the "Analyze" / "Parse" action. 6.Observe the result.	The uploaded resume should be parsed successfully, and the system should display the JD matching results (e.g., match score, key skills matched, gaps, etc.) without errors.	The system throws an **"Error analyzing resume"** message, and no parsing/matching results are generated.
1.Log in to the application/portal. 2.Navigate to Talent Growth → Recruitment ATS → Recruitment → Cost Tracking & Cost-Per-Hire Calculator. 3.Click "Record Entry" (or equivalent) to add a new expense. 4.Enter the required expense details. 5.Click "Save" / "Submit" once. 6.Check the table to see if the entered expense has been recorded. 7.If not saved, repeat the save action and observe.	On the first attempt, the entered expense data should be saved successfully and immediately reflected in the Cost Tracking table.	The entered expense data is not saved to the table on the first attempt; the save action appears to fail or not register correctly, requiring repeated attempts.
1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal → Appraisal, Increments & PIP Lifecycle.. 3.Locate the "Configurable Rating Scales and Performance Template Breakdown" table. 4.Observe the alignment of column headers versus the data rows beneath them. 5.Observe whether data values appear under their correct corresponding column headers.	1.The table should display with proper alignment — column headers should correctly align with their respective data rows 2.All data (rating scale values, performance template details, etc.) should be clearly placed within the correct cells, with consistent spacing/formatting.	The table alignment is broken — data appears misplaced, shifted, or not properly aligned under the correct column headers, making the table difficult to read and potentially leading to misinterpretation of rating/performance data.

1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal → KRAs, KPIs & Goal Setting Hub. 3.Select an employee and enter goal details (KRA/KPI, target, etc.) under "Assign Employee Goal." 4.Click "Save" / "Assign" once. 5.Check whether the goal appears against the employee's record. 6.If not saved, repeat the save action 2–3 times until it registers. 7.Review the employee's assigned goals list/table.	On the first attempt, the goal should be assigned and saved successfully against the employee, with only **one** entry created per assignment.	1.The goal does not save on the first attempt; it takes 2–3 attempts to save successfully. 2.Multiple duplicate goal entries are created for the same assignment due to the repeated attempts.
1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal. 3.Enter the required details for a promotion recommendation (employee, new role/grade, justification, etc.). 4.Click the "Recommend Promotion" button once. 5.Check the table to see if the recommendation entry has been added. 6.If not saved, click the button again and observe.	On the first click, the "Recommend Promotion" action should immediately save the entered details and add a corresponding row to the table	The data is not saved to the table on the first click; the entry only appears after multiple attempts.

1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal → Increment Recommendations & Payroll Integration. 3.Enter details for the first employee's increment recommendation and click "Recommend Increment." 4.Verify the first record appears correctly in the table. 5.Without refreshing, enter details for a second employee's increment recommendation.. 6.Click "Recommend Increment" again. 7.Observe the table.	1.Each new increment recommendation should be added to the table as a new row, without affecting or deleting previously saved records. 2.After step 6, the table should show both the first and second increment records.	1.After entering and saving the second record, the first record disappears from the table. 2.The second record is also not saved, leaving the table with no valid data (or missing the newly entered data).
1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal. 3.Enter the required details for a promotion recommendation (employee, new role/grade, justification, etc.). 4.Click the "Recommend Promotion" button (as noted in the earlier bug, this may require multiple clicks before the entry appears). 5.Navigate to the promotion recommendations table. 6.Search/filter for the specific employee's recommendation entry. 7.Observe the number of rows/records created for that single recommendation action.	Each "Recommend Promotion" action should result in exactly **one** corresponding entry in the table, regardless of how many times the button was clicked before the save registered.	Multiple duplicate records are saved in the table for what should be a single promotion recommendation.

1.Log in to the application/portal. 2.Navigate to Talent Growth → Performance & Appraisal → Performance Improvement Plan (PIP) Lifecycle. 3.Enter details for the first employee's PIP record and save it. 4.Verify the first record appears correctly in the table. 5.Without refreshing, enter details for a second employee's PIP record. 6.Save the second record. 7.Observe the table	1.Each new PIP record should be **added** to the table as a new row, without affecting or deleting previously saved records. 2.After step 6, the table should display both the first and second PIP records.	1.After entering and saving the second record, the first record disappears from the table. 2.The second record is also not saved, resulting in no valid PIP data remaining in the table
1.Log in to the application/portal. 2.Navigate to the Dashboard Overview screen. 3.Observe the text/font colors used across various widgets, labels, values, and headings. 4.Attempt to read the content under normal viewing conditions (standard monitor brightness, no zoom).	1.All text on the Dashboard Overview should have sufficient color contrast against its background, following readability/accessibility standards (e.g., WCAG AA contrast ratio of at least 4.5:1 for normal text). 2.Users should be able to clearly read all labels, values, and headings without strain, regardless of screen or lighting conditions.	Font colors on the Dashboard Overview are not legible/clear — text appears too light, low-contrast, or blends with the background, making it hard to read.

1.Log in to the application/portal. 2.Land on the Dashboard Overview (or any screen with the top navigation bar visible) — as seen under Talent & Growth → Module 7: Employee Experience & Engagement. 3.Observe the top navigation bar, specifically the area around "Support & Reports" and the search bar to its right.	1.The "Support & Reports" navigation tab and the search bar should each occupy their own distinct, non-overlapping space in the navigation bar. 2.Both the tab label and the search bar placeholder text should be fully visible and legible. 3.The search bar should be fully clickable/usable without being obstructed.	1.The "Support & Reports" tab text overlaps with the search bar, causing both to render illegibly on top of one another. 2.This likely also blocks or interferes with clicking/using the search bar in this state.
1.Log in to the application/portal. 2.Navigate to IT/HR Helpdesk → Support Desk. 3.Click "Open New Ticket" (or equivalent button). 4.Fill in the required ticket details (category, description, priority, etc.). 5.Click "Submit" / "Create Ticket." 6.Observe the result.	1.A new ticket should be created successfully with the entered details. 2.The user should receive a confirmation (e.g., ticket ID, success message) and see the new ticket reflected in the ticket list/table.	The "Open New Ticket" action does not work — the ticket fails to create, no confirmation is shown, or the ticket doesn't appear in the list after submission.

1.Log in to the application/portal. 2.Navigate to Welfare Support. 3.Click to open the "Request Welfare Support" form/popup. 4.Click on the "Welfare Type" dropdown field. 5.Observe whether a list of selectable options appears below/near the dropdown.	Clicking the "Welfare Type" dropdown should display a clearly visible list of all available options (e.g., Education Support, Medical Support, etc.) for the user to choose from.	No visible list of options appears when the dropdown is clicked/opened — the options are not visible until (or unless) already selected, making it impossible for the user to see and choose from available choices properly.
1.Log in to the application/portal. 2.Navigate to HR Budget & Financial Reports Export section. 3.Click the Export button on any report card (e.g., "Export (PDF/XLSX)" under Annual HR Budget Report). 4.Observe whether the file downloads. 5.Repeat for the remaining report cards (Budget Variance & Forecast, Recruitment Cost ROI Report, Welfare Expenditure Register, Manpower Headcount Financials)	Clicking any "Export" button should successfully download a valid, correctly formatted file (PDF or XLSX/CSV as labeled) containing the corresponding report data.	The export/download does not work for the report files — no file downloads, or the download fails/produces an unusable file.

1.Log in to the application/portal. 2.Navigate to Statutory Compliance Document Vault. 3.Locate a document tagged as "Challan Receipt" (e.g., "PF ECR Payment Receipt Jul 2026"). 4.Click the "View" button on that document card. 5.Observe the result	Clicking "View" should open the uploaded PDF document (Challan Receipt) in a viewer/new tab, allowing the user to read its contents.	Clicking "View" does not open the document — no response, a blank/broken viewer, or an error occurs.

1.Log in to the application/portal. 2.Navigate to the Immutable Statutory Audit Logs section (under Finance/Budget module). 3.Observe the table columns: Audit ID, Action, Module, Entity ID, Performed By, and the final details/data column. 4.Observe the content displayed in the last column for each row. 5.Observe the left edge of the screen for the table title and "Audit ID" values.	The details column should display a concise, human-readable summary of the audit change (e.g., "Proposed Budget: ₹10,00,000 → Approved Budget: ₹10,00,000" or similar key-value highlights), not a raw JSON dump. The table should fit within the visible viewport width, with long content wrapped, truncated with an ellipsis, or made expandable (e.g., "View Details" link/modal) rather than overflowing horizontally. The table should fit within the visible viewport width, with long content wrapped, truncated with an ellipsis, or made expandable (e.g., "View Details" link/modal) rather than overflowing horizontally. The table title ("Immutable Budget Audit Logs & Revision Timeline") and all column values (e.g., Audit ID) should be fully visible, not clipped at the screen edge.	1.The last column shows the complete raw JSON object as plain text, causing the table to overflow far beyond the screen width 2.The table title and Audit ID values are cut off/clipped at the left edge of the screen. 3.Users must scroll extensively to read audit details, and the raw JSON format is not readable/user-friendly.

1.Log in to the application/portal. 2.Navigate to Automated Full & Final (F&F) Settlement Register. 3.Process/generate an F&F settlement for an employee (enter/confirm relevant exit and settlement details). 4.click approve and lock Fnf 5.Review the F&F Settlement Register table. 6.Observe the number of rows/records created for that single settlement.	Each F&F settlement action should result in exactly **one** corresponding entry in the Settlement Register.	Multiple duplicate records are created in the F&F Settlement Register for what should be a single settlement entry.

1.Log in to the application/portal. 2.Navigate to the No Due Certificate (NDC) Generation section. 3.Click "Download Official NDC PDF" for a fully cleared employee (e.g., NDC-2026-1001, Anil Kumar). 4.Observe the success popup, then check if a file is actually downloaded. 5.Navigate to Official Exit Letters Generator. 6.Click "Generate" next to Relieving Letter, Experience Certificate, and Full & Final Statement one by one. 7.Observe the success popup for each, then check if a corresponding document/file is actually produced or downloaded.	1.Clicking "Download Official NDC PDF" should download a valid, correctly generated PDF of the No Due Certificate. 2.Clicking "Generate" for each exit letter type should either download the generated document or make it available for download/viewing, matching the success message shown.	A success popup appears in all cases, but **no actual document is downloaded or generated** — the download/generate action does not produce any file, despite the UI indicating success.

1.Log in to the application/portal. 2.Navigate to Governance → Observation Tracker → Reports Panel. 3.Locate the "HR Observations Compliance Reports" section. 4.Click "Print Report Sheet." 5.Observe the resulting print preview/output layout.	1.The print output should show a clean, report-formatted view containing only the relevant report content (e.g., "Report 4: Overdue Target Observations," "Report 3: Pending Verification Closure Review," table data, etc.). 2.All navigation bars, tabs, buttons, and other interactive UI elements should be hidden/excluded from the print view. 3.Report tables and headers should be properly aligned and readable on the printed page.	1.The print preview shows the full application UI overlapping with report content — the top navigation bar, tab menus, and buttons all appear cluttered and misaligned together at the top of the printed page, rather than being hidden. 2.This makes the printed report look unprofessional and harder to read, with overlapping text in the nav area

1.Log in to the application/portal. 2.Navigate to Governance → Internal Regulatory Audit Archives. 3.Locate any of the listed audit report cards (e.g., Q1_Statutory_Compliance_Report_2026.pdf). . 4.Click the "Download Report" button. 5.Observe whether the file downloads. 6.Repeat for the other two report cards to confirm if the issue is consistent across all documents	Clicking "Download Report" should successfully download the corresponding PDF file (e.g., Q1_Statutory_Compliance_Report_2026.pdf) to the user's device.	Clicking "Download Report" does not download any file — no response, no file saved, and no error shown to the user

1.Log in to the application/portal. 2.Hover the mouse over the "i" icon in the top navigation bar (next to Governance dropdown). 3.Observe the dropdown menu appearing with "Support Tickets," "Reports & Audits," and "Alert Center." 4.Try moving the cursor down/into the dropdown to click one of the options. 5.Observe the menu closing before the click can register.	The dropdown menu should remain open and interactive while the cursor moves from the "i" icon into the dropdown area, allowing the user to successfully click and select any of the three options.	The dropdown appears on hover but disappears as soon as the cursor moves toward it, preventing any option from being clicked — effectively making "Support Tickets," "Reports & Audits," and "Alert Center" inaccessible via this menu.

1.Log in to the application/portal. 2.Navigate to Growth & Talent → PIP Lifecycle Engine. 3.Trigger both the "Initiate PIP" form and the "Periodic PIP Review Log" panel to display on screen (e.g., by initiating a new PIP while a review log for an existing PIP is also open/expanded). 4.Scroll down and observe how the two sections are positioned relative to each other.	1.The "Initiate PIP" form and the "Periodic PIP Review Log" panel should each be displayed as clearly separated, distinct sections/cards — ideally in separate modals, tabs, or with adequate spacing/dividers between them — so the user can clearly distinguish which fields belong to which action. 2.Only one of these should logically be open/active at a time, or they should be visually and functionally isolated if shown together.	Both panels appear collided/stacked with minimal to no separation, making it unclear where one section ends and the other begins, and creating a confusing, cluttered UI.
1.Log in to the application/portal. 2.Switch the application to Light Theme (using the theme toggle icon in the top nav). 3.Navigate to Growth & Talent → Training & Competency Evaluation → Dashboard Overview. 4.Observe the module header card and the four stat cards (Scheduled Programs, TNA Requests, Issued Certificates, Skill Gap Closure).	All text in Light Theme should have sufficient color contrast against its background (following WCAG AA standards, minimum 4.5:1 for normal text) so headings, labels, and values are clearly legible.	Text across the module header and stat cards appears faded/low-contrast in Light Theme, making it difficult to read titles, labels, and sub-values clearly.

1. Log in to HR O platform. 2. Navigate to Growth & Talent → Learning & Dev. 3. Locate a training program card 4. Click the "Enroll Now" button. 5. Open browser DevTools → Console/Network tab to observe the request.	User should be successfully enrolled in the training program, with a confirmation message/UI update (e.g., button changes to "Enrolled" or a success toast appears).	POST request to /api/training/programs/TRN-1002/enroll fails with 400 (Bad Request). Console shows: Failed to load resource: the server responded with a status of 400 () . No enrollment confirmation is shown to the user; the action silently fails from the user's perspective.

1. Log in to HR O platform. 2. Navigate to the module where position requests are raised (e.g., Operations/Governance). 3. Click the action that opens "Request Position Approval" modal. 4. Observe the spacing/alignment of input fields and labels across the two-column layout.	All form field rows (label + input box pairs) should have consistent padding, margin, and vertical alignment across both columns, with uniform spacing between rows and no visual crowding.	Input boxes and labels appear unevenly spaced/misaligned across the two-column grid, creating a visually inconsistent or "colliding" layout.

1. Log in to HR O platform. 2. Navigate to Growth & Talent → Recruitment (resume screening section). 3. Enter skills (e.g., "React.js, Node.js, Express, MongoDB, Docker"). 4. Under "Upload Resume File," choose a file 5. Click "Parse Resume & Calculate Score." 6. Open DevTools → Console/Network tab to observe the request.	Resume should upload successfully, get parsed, and return a calculated score with extracted details (skills match, accuracy, etc.), reflected in the "Automated Extraction" and related score widgets.	POST request to/api/recruitment/resumes/uploadfails with 500 (Internal Server Error). Console shows:POST https://hrorbit-sigma.vercel.app/api/recruitment/resumes/upload 500 (Internal Server Error). No score or parsed data is returned to the user; an "analyzing error" is shown instead.

1. Log in to HR O platform. 2. Navigate to Finance & Exit → Budget Planning. 3. Locate the "Annual HR Budget Planning Register" table. 4. Click "View" under the Actions column for any budget row 5. Observe the screen — no modal, drawer, or new page opens. 6. Check DevTools Console for any errors/network calls triggered.	Clicking "View" should open a detail view (modal, drawer, or dedicated page) showing full budget record details — e.g., full breakdown of Proposed/Approved/Utilized amounts, cost center details, approval history, and status timeline for that Budget ID.	Clicking "View" produces no visible change on the page — no modal, no navigation, no error message. DevTools console shows **no errors, warnings, or network activity** at all, suggesting the button may have no click handler attached or the handler is silently failing without any exception being thrown.

1. Log in to HR O platform. 2. Navigate to Finance & Exit → Budget Allocation. 3. Click "Transfer" next to any active allocation 4. Observe the "Transfer allocation request initiated" toast appears. 5. Open DevTools → Console tab. 6. Observe the timeout error and violation warnings logged.	The Transfer action should complete without triggering unrelated errors. The notifications API should respond within a reasonable time (or fail gracefully without a hard timeout/console error), and no long-running message handler violations should occur that could freeze or lag the UI.	Console logs:Error fetching notifications: AxiosError: timeout of 8000ms exceeded (at h.ontimeout) along with four [Violation] 'message' handler took Nms warnings (204ms–1926ms), suggesting the notifications fetch and/or an associated event handler is blocking or badly delayed, likely triggered as a side effect of the Transfer action.

1. Log in to HR O platform. 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics → Budget History. 3. Locate the "Immutable Budget Audit Logs & Revision Timeline" table. 4. Observe any row with Action = CREATE_BUDGET	The audit log should display the change details in a human-readable format — e.g., a formatted summary ("Proposed Budget: ₹20,00,000, Approved Budget: ₹20,00,000, Category: Recruitment...") or a collapsible "View Details" control, rather than raw JSON text spilling across/beyond the table column.	The full raw JSON string (including internal keys like _id, updatedBy, createdAt) is rendered as plain text in the table cell, overflowing the visible column width and requiring horizontal scrolling to read.

1. Log in to HR O platform. 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics. 3. Click "Welfare Budget" tab — note the table shown. 4. Click "Welfare Expense" tab — compare the table shown. 5. Observe both tabs render the same columns and appear to show the same type of data (expense records), rather than "Welfare Budget" showing budget allocation data.	"Welfare Budget" tab should show budget planning data (proposed/approved welfare budget amounts, categories, cost centers — similar to the Budget Planning register). "Welfare Expense" tab should show actual logged expenditures/vendor invoices against that budget. The two views should be visibly distinct in structure and purpose.	Both tabs display the same "Employee Welfare Expenditures & Vendor Invoices" table structure with expense-level data (WFX-1790686136387, WFX-1790686036251, etc.), with no separate budget allocation view.
1. Log in to HR O platform. 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics → Welfare Budget tab. 3. Open DevTools → Console tab. 4. Observe 401 errors for /api/budget/welfare-expense /api/budget/welfare , and /api/policies/employee-status 5. Note the "Using stateful fallback for budget module" warning.	All API calls should authenticate successfully using the logged-in user's session/token and return live data. No 401 errors should occur for an authenticated user with appropriate permissions.	The app falls back to cached/stateful data instead of showing an error to the user, masking the underlying auth failure.

,

1. Log in to HR O platform. 2. Navigate to Employee Profile page (/employee/RU1QLTAwMDI/emp-profile). 3. Open the ticket-raising form (Category: "HR Query"). 4. Select a Priority (e.g., "Low"). 5. Optionally enter a description. 6. Click "Submit Ticket." 7. Observe DevTools Console for the error.	The ticket should be submitted successfully, with a confirmation message shown to the user and the ticket created in the backend/ticketing system.	Console throws: Uncaught (in promise) TypeError: e.preventDefault is not a function originating from the form's onSubmit handler (index-B8_YZ7Xk.js:143:5085). The ticket submission fails silently from the user's perspective — no success or error feedback is shown, and no ticket is created.
.1. Log in to HR O platform. 2. Navigate to Employee Profile (/employee/RU1QLTAwMDI/emp-profile). 3. Fill in one or more Personal Details fields (e.g., Street/Area, City, State, PIN Code, Emergency Contact). 4. Click "Save Changes." 5. Observe that all entered field values vanish and no confirmation message appears. 6. Open DevTools → Console to confirm the error.	On clicking "Save Changes," the entered personal details should be validated and saved to the backend, with a success message/toast confirming the update. If a field is invalid, an appropriate inline validation error should be shown instead.	Console throws: Uncaught (in promise) TypeError: e.preventDefault is not a function at the same onSubmit handler (index-B8_YZ7Xk.js:143:5085) All entered field data is lost/reset, and no success or failure feedback is shown to the user.

1. Log in to HR O platform. 2. Navigate to Employee Profile (/employee/RU1QLTAwMDI/emp-profile). 3. Click "Upload Profile Picture." 4. Select an image file and attempt to upload. 5. Observe the "Failed to upload profile picture" toast message. 6. Open DevTools → Console to confirm the timeout error.	The selected image should upload successfully within a reasonable time, and the profile picture should update with a success confirmation shown to the user.	Upload fails with a toast message: "Failed to upload profile picture." Console shows: AxiosError: timeout of 8000ms exceeded (at h.ontimeout), indicating the request is timing out rather than being rejected outright — suggesting a slow/unresponsive backend endpoint or an oversized file not being handled gracefully.

1. Log in to HR O platform as an employee (e.g., Aditya, EMP-0002). 2.Navigate to Employee Profile 3. Locate and click "Update Password." 4. Enter current and new password details (if prompted). 5. Submit the change. 6. Observe the "User not found" error returned.	The logged-in user's password should update successfully, with a confirmation message shown. Since the user is authenticated and viewing their own profile, the system should correctly resolve their user ID/record for the password update request.	The action fails with a "User not found" error, despite the user being logged in and on their own valid profile page. No password change is applied.

1. Log in to HR O platform. 2. Navigate to Finance & Exit → Exit Workflow & Full & Final (F&F). 3. Click the "Department Clearances" tab. 4. Observe the "Multi-Department No Due Clearance Tasks" table and compare column header positions against the data rows below.	All column headers (Clearance ID, Exit ID, Clearance Department, Approver Name, Action Date, Remarks/Handover Notes, Status, Action) should align consistently with their corresponding data values across every row, regardless of varying text length in any cell.	Column data appears unevenly spaced/misaligned relative to the headers — likely due to variable-length content (e.g., longer department names or remarks) not being handled with fixed/consistent column widths, causing the table to look visually uneven.

1. Log in to HR O platform. 2.Navigate to My Dashboard 3. Scroll to the "Training Reminders" section. 4. Click "View Course" under "Secure Coding & Manifest V3 Guidelines." 5. Observe no navigation, modal, or response occurs. 6. Check DevTools Console/Network tab for any related errors or requests.	Clicking "View Course" should navigate the user to the relevant training/course page (e.g., Learning & Dev module) or open the course content in a modal, allowing the user to continue/complete the assigned training.	No visible action occurs on click — no page navigation, no modal, no error message shown to the user. The console at the time of testing shows only unrelated background errors (repeated notification fetch failures: AxiosError: timeout of 8000ms exceeded, Network Error, and net::ERR_INTERNET_DISCONNECTED on /api/notifications), with no error specifically tied to the "View Course" click.

1. Log in to HR O platform. 2. Navigate to Operations → Attendance (Overview tab). 3. Observe the "Attendance Punch Clock" widget — note current status shows "Clocked In" with an abnormal Shift Timer value and no clock-in time. 4. Attempt to click "Punch Out" (or "Punch In" if status resets). 5. Observe the red error banner at the top: "Timesheet validation failed: clockIn: Cast to date failed for value..." 6. Check DevTools Console for related errors.	Punch In should record a valid date-time value for clock-in, and Punch Out should successfully close out the shift using that stored value. The Shift Timer should reflect actual elapsed time since a valid punch-in, and "Clocked in at" should display the correct timestamp. No validation errors should occur during normal punch in/out operations.	The timesheet record fails backend validation because the clockIn ield is being stored/sent as a bare time string ("00:47") rather than a valid date object, causing a Mongoose/schema cast error: Cast to date failed for value "00:47" (type string) at path "clockIn".
1. Log in to the HR O platform. 2. Open any page (e.g., Notifications at /employee/RU1QLTAwMDI/emp-notifications). 3. Observe the top nav bar, where the last item after "Finance & Exit" is cut off. 4. Click the right arrow (>) at the top left, next to the logo. 5. Observe that the nav bar does not scroll or shift.	Clicking the right arrow should scroll the nav bar so the hidden menu items become visible. Clicking the left arrow should scroll it back.	Clicking the arrows has no visible effect. The nav bar stays in place, and the cut-off menu item remains partially hidden and hard to access.

1. Log in to the HR O platform. 2. Open any page (e.g., /employee/RU1QLTAwMDI/emp-notifications). 3. Hover over or click the truncated menu item after "Finance & Exit". 4. Observe the dropdown with Tasks, Meetings, Daily Reports and Helpdesk Support. 5. Move the cursor to one of the options and click it. 6. Observe that the dropdown closes before the click registers.	The dropdown stays open while the cursor moves from the trigger to the options. Clicking an option navigates to that page (Tasks, Meetings, Daily Reports, Helpdesk Support). The dropdown appears directly beneath its parent menu item.	The dropdown closes as soon as the user moves toward an option, so no option can be clicked. The dropdown is also offset from its trigger and overlaps the search bar area.
1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Navigate to My Dashboard (/employee/RU1QLTAwMDI/emp-dashboard). 3. Use the application normally, moving between modules. 4. Observe the orange “Database Disconnected” banner appearing intermittently. 5. Note the time of each occurrence and which action preceded it.	The application maintains a stable database connection. Live data loads consistently, and the offline banner appears only during a genuine outage.	The banner “Database Disconnected — Showing cached offline data” appears often during normal use, and the dashboard shows cached data in place of live data. The dashboard values (0/12 Days attendance, 15 Days leave balance, 0 Meetings) may be stale.
1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Navigate to Operations → Attendance (Overview tab), or view the punch clock on the dashboard. 3. Click “Punch In”. 4. Observe the “Clocked in at” field and the Shift Timer. 5. Refresh the page and observe both again.	After punching in, “Clocked in at” shows the actual punch-in time (e.g., “Clocked in at 09:05 AM”). The Shift Timer counts up from zero, reflecting the time elapsed since that punch-in. The values persist after a page refresh.	“Clocked in at” shows “--” and no punch-in time is displayed. The Shift Timer shows 330:33:23 (about 13.8 days) with the status stuck at “Clocked In”.

1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Open My Dashboard (/employee/RU1QLTAwMDI/emp-dashboard). . Click the search bar in the top right. 4. Type a term that matches a feature (e.g., “payroll & salary”, “leave”, “attendance”). 5. Press Enter or wait for suggestions. 6. Observe that nothing appears or happens.	Typing a term shows matching features or tools in a dropdown (e.g., Payroll, Payslips, Salary), or Enter opens a results page. If nothing matches, a “No results found” message is shown. Selecting a result navigates to that page.	No suggestions, results or messages are shown, and no navigation occurs. The user gets no feedback that the search was attempted.

1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Open the Settings page (/employee/RU1QLTAwMDI/emp-settings). 3. Look at the “Security & Config” section at the top. 4. Observe the broken image icon with the alt text “Security Illustration”. 5. Open DevTools → Network tab, filter by Img, and check the failing image request.	The security illustration loads and displays correctly beside or below the section description.	A broken image icon with the text “Security Illustration” is displayed, and the graphic does not render.

1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics. 3. Open the “Budget Planning” tab. 4. Click “View” in the Actions column for any row (e.g., BDG-1790683637521). 5. Observe that nothing happens. 6. Check the DevTools Console and Network tab.	Clicking “View” opens the details of that budget record (amounts, cost center, category, status, approval history) in a modal, drawer, or detail page.	No visible response on click. The console shows only Tracking Prevention warnings (browser privacy messages) and no errors, which again suggests the button has no working click handler or the handler fails silently.

1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics. 3. Click the “Cost Analytics” tab. 4. Observe the content area below the tabs. 5. Check the DevTools Console and Network tabs.	The tab shows cost analytics data, such as cost breakdown tables and charts by department, category and cost center. If no data exists, it shows a clear “No data available” message.	The content area is completely blank. The console shows only Tracking Prevention warnings ((Tracking Prevention blocked access to storage for https://cdn.jsdelivr.net/npm/chart.js)
1. Log in to the HR O platform as an employee (e.g., Aditya). 2. Navigate to Finance & Exit → HR Budgeting & Cost Analytics. 3. Click the “Forecast & Variance” tab. 4. Observe the content area below the tabs. 5. Check the DevTools Console and Network tabs.	The tab shows budget forecast and variance data, such as planned vs. actual spend, variance amounts and percentages, and trend charts. If no data exists, it shows a “No data available” message.	The content area is blank, with no data, loading state or error message.
1. Log in to the HR O platform as an HR user (e.g., Venkat) 2. Open Enterprise Recruitment & Onboarding 3. Click the option to create a Manpower Requisition (or search “manpower” and open it). 4. Observe the vertical position and spacing of the “Create Manpower Requisition” modal. 5. Repeat with DevTools closed and at different browser zoom levels.	The modal opens vertically centered, or at a consistent offset from the top, with balanced spacing above and below. The full form header and first fields are visible without scrolling the page, and the modal body scrolls internally if the content is taller than the screen.	The modal appears near the bottom of the viewport with a large empty gap above it, and the lower form fields (Grade Band, Cost Center) are cut off. Extra spacing is also reported at the bottom.

1. Log in to the HR O platform as an HR user (e.g., Venkat). 2. Open Talent & Growth → Recruitment ATS 3. Open the Cost Tracking tab. 4. Click “Record Expense Entry”, fill in the details and submit. 5. Scroll down the page and observe a second Module 5 section with another cost table. 6. Refresh the page and check whether the duplicate remains.	The new entry appears as an additional row in the existing cost table. Only one Module 5 section and one cost table are shown.	A duplicate Module 5 section and cost table appear below the original after the new entry is submitted.
